

FDA Authorization of safe use of food contact substances: Biodolomer[®]

GAIA BioMaterials AB has received U.S. Food & Drug Administration (FDA) authorization to market Biodolomer[®] as safe for food contact for its intended use in single use polyester films, coatings, and molded articles in contact with all food types of food under B through H, referring to Food Contact Substance Formulation (FCF) 000154, as according to Prenotification Consultation (PNC) 2953.

The authorization was obtained for a material blend containing:

- polybutylene adipate terephthalate (PBAT)
- polylactic acid (PLA)
- polybutylene succinate (PBS)
- calcium carbonate
- talc

For Biodolomer[®] grades containing PBS, the authorization is limited to non-alcoholic foods.

For information whether your Biodolomer[®] grade contains PBS, please refer to the Material Safety Data Sheet for said grade, which can be obtained through the GAIA BioMaterials website (www.gaiabiomaterials.com).

Yours sincerely

Konrad Rosén, R&D Manager
